John Doe

Backend Software Developer

Email: john.doe@example.com | Phone: +49 000 000000 | Location: Germany

Professional Summary

Backend-focused software developer with experience designing, implementing, and maintaining scalable server-side systems. Strong background in C++ and Python with Django, complemented by practical frontend collaboration using React. Comfortable working in agile teams and contributing across the full software lifecycle.

Technical Skills

- Languages: C++, Python, JavaScript
- Backend: Django, REST APIs, Microservices
- Frontend: React (basic to intermediate)
- Databases: PostgreSQL, MySQL, SQLite
- Tools: Git, Docker, Linux, CI/CD pipelines
- Concepts: OOP, Data Structures, Multithreading, Software Architecture

Professional Experience

Backend Software Developer – Company B (2023 – Present)
- Develop and maintain backend services using Python and Django.
- Design RESTful APIs consumed by web and internal services.
- Optimize performance-critical components written in C++.
- Collaborate with frontend developers using React for API integration.
- Participate in code reviews, testing, and deployment processes.

Junior Software Developer – Company A (2021 – 2023)
- Assisted in backend development using Python and Django.
- Implemented small to medium features and fixed bugs in existing systems.
- Worked with relational databases and wrote optimized SQL queries.
- Supported senior developers and gained exposure to frontend technologies including React.

Education

Bachelor of Science in Computer Science – Sample University (2017 – 2021)
Focused on software engineering, algorithms, data structures, and systems programming. Completed coursework and projects in C++ and Python.

High School Diploma – Sample High School (2014 – 2017)
General education with emphasis on mathematics and computer science.

Hobbies & Interests

- Playing the drum set
- Playing American football
- Technology projects and continuous learning
